RESILIENCE

We are pleased to bring you the virtual 2021 Western Regional OT Spring Symposium (WROTSS). When seven states came together to collaborate on planning the initial WROTSS in Las Vegas last year, we envisioned a continuing education event that would bring high-quality, evidence-based, topical professional development to many in the west and beyond, while providing unique and intimate networking opportunities. Little did we know how fortuitous our keynote, *Occupational Therapy in the Age of Disruption*, would become just as we launched registration. WROTSS was the final large in-person gathering of

OT practitioners before safe-at-home orders and social justice discord erupted across the country. While it has been a year that we hope will not be repeated in our lifetime or that of younger generations to follow, this past year has demonstrated above all else the resiliency of occupational therapy. Out of disruption can come forward motion. Resilience is defined as 'the capacity to recover quickly from difficulties.' Whether it's in our day-to-day clinical practice, educating our future professionals, or facing significant disruptions, occupational therapy practitioners have a resiliency that supports them well in their role as essential health care workers. We encourage you to join us this year as we celebrate our resiliency and look forward to new opportunities in the future.
